SUMMARY

I'm a software developer: I build full-stack web applications (Next.js, TypeScript, Node.js, PostgreSQL), automate data processes with Python and Electron, and deploy my own services with Docker, Linux and Nginx.

EDUCATION

Universidad Católica de Temuco — Temuco, Chile
Civil Engineering in Computer Science (Ingeniería Civil en Informática) — *In progress*

EXPERIENCE

Temblo — temblo.cl
Full Stack Developer (personal project) — *Present*

- I built and operate a real-time 3D seismic monitoring platform for Chile that ingests global telemetry and detects earthquakes automatically within seconds.
- I developed the full stack: a Next.js, TypeScript and Tailwind CSS interface (3D view, camera control, stations, archived events, sound alarm) and a Node.js/Express API with MongoDB and JWT; I deploy it with Docker and Nginx.

GruasCares — gruascares.cl
Full Stack Developer — *Present*

- I'm developing a full-stack platform for Grúas Cares, a vehicle recovery and workshop business: landing page, tow-truck requests, workshop scheduling and staff job management, with panels by role (client, mechanic, admin).
- I implemented role-based authentication (JWT in httpOnly cookies, rate limiting) with Next.js, TypeScript, Express on Bun, PostgreSQL and Drizzle ORM, and backed it with automated tests and Docker containers.

Universidad Católica de Temuco — On-site
Data Management and Monitoring Assistant (DGIA – PACE) — *Sep 2025 – Present*

- On my own initiative, I developed a cross-platform desktop application (Windows, Linux and macOS) with Electron and TypeScript, now in production, that automates the bulk download of Moodle course reports through web scraping, removing a manual process.
- I built a module that removes teacher and assistant records and merges each course's files into one multi-sheet Excel workbook.

Universidad Católica de Temuco (DGE) — Remote
Academic Data Migration and Processing Specialist (Python/XML) — *Nov 2025 – Dec 2025*

- I automated the digital publication of the CLABES congress proceedings on Open Journal Systems (OJS) with two Python scripts: one splits and renames the proceedings into articles, the other generates XML metadata for bulk import, with no manual work.

MiPortalVentas
Software Developer — *2025*

- I developed an ERP system for MiPortalVentas.

Gobierno Regional de La Araucanía — Temuco, Chile
IT Intern (Initial Internship) — *Dec 2025 – Jan 2026*

- I configured Cisco switches and PBX telephony, managed users with Active Directory, upgraded hardware and deployed Windows, and gave direct technical support to the Regional Council and the Governor.

CINAP — Hybrid
E-learning Tutor — *Dec 2023 – Present*

LEADERSHIP

Universidad Católica de Temuco — Temuco, Chile
Academic Processes Lead, Bachelor Program — *Jul 2026 – Sep 2026*

- I led the area's operations through the semester changeover, directing a team of 3 and reporting to the Program Director.
- I reviewed and optimized the schedules of approximately 300 students, balancing offering, section capacity and rooms.
- I resolved teaching-planning contingencies quickly, restructuring schedules after unexpected changes.
- Previously, as Assistant Coordinator (Jul – Aug 2025; Jan – Apr 2026), I supported enrollment.

SKILLS

Languages: Python, TypeScript, JavaScript
Web and backend: Next.js, React, Angular, Node.js, Express, Bun, Django, Flask, FastAPI, REST APIs, Tailwind CSS
Data and DevOps: PostgreSQL, MongoDB, MySQL, SQLite, Drizzle ORM, Docker, Linux, Nginx, Git
Other: Electron, web scraping, XML, Ionic, Capacitor, Cisco IOS, Active Directory
